Graduate Testimonials

“Not only did the general surgery residency program at Mercy Medical Center provide the best educational experience I could have asked for, but my wife and children loved living in Des Moines. Des Moines area schools are exceptional and the family entertainment is comparable to large metropolitan cities.

The Mercy program included breadth and volume of pathology, dedicated attending staff, and strong didactic education. After acquiring the skills and knowledge needed to treat a wide variety of surgical diseases while maintaining compassion and concern for the patient, I am confident, successful and respected as a new private practice general surgeon in Kansas City, MO. In addition, outstanding research projects are being presented at a national level, making one’s application to post-graduate fellowships more competitive. I would strongly recommend the Mercy program to anyone interested in a surgical career.”

– Spencer Kirk, D.O., 2011 graduate

“Mercy more than prepared me for practice as a general surgeon. You get a wide range of exposure, from complicated academic style cases to plentiful bread and butter general surgery cases. To me it represents the best of both worlds. I had enough exposure to prepare me for anything that can and will come at you in practice. The staff are approachable and supportive. Overall, my time there was memorable and rewarding.”

– Brian Gebhart, D.O., 2009 graduate

“The Mercy Des Moines General Surgery Residency is an excellent training program. It is equally strong in both didactics and technical training. I felt confident both in the office and the operating room when my residency was complete. During my Plastic and Reconstructive Surgery Fellowship, I have had the opportunity to work with many general surgeons and residents from various universities and clinics, and feel that the Mercy program should be considered one of the top in the nation. I am proud to have graduated from there.”

– Bryan Folkers, D.O., 2009 graduate

Welcome to the Mercy General Surgery Residency Program

Our Residency Program is a five-year non-pyramidal general surgery program, with four residents at each postgraduate level. In addition to an expansive general surgery exposure, our senior residents rotate through a wide spectrum of surgical subspecialties including vascular, ICU, transplant, urology, surgical oncology and cardiothoracic. Elective rotations are integrated into the fourth year so that further specialty experience can be obtained. For residents interested in an academic surgical career and/or further postgraduate training, an optional funded one-year research program can be pursued between the PGY-3 and PGY-4 years.

Our clinical faculty instructs and supervises residents in both the inpatient and outpatient settings. Faculty members include general surgeons, many with advanced laparoscopic skills, as well as those with fellowship training in colorectal surgery, surgical and GYN oncology, critical care, cardiothoracic and vascular/endovascular surgery. Faculty members are also active in the laparoscopic bariatric program and a busy multidisciplinary breast surgery center. Chief residents graduate with well over 1,250 operative procedures to their credit, as well as hundreds of endoscopy cases, far exceeding the minimums required by the American College of Surgeons and the allopathic RRC. The totality of our residents’ surgical experience is well-suited for independent surgical practice in rural and small urban settings, where many of our graduates choose to locate.

While many tend to concentrate on the operative experience in assessing a program, we feel a comprehensive didactic program is equally essential for preparing the trainee to practice state-of-the-art general surgery. The curriculum incorporates case-based learning, evidence-based medicine, and basic surgical science in regularly scheduled conferences including Journal Club, Grand Rounds, Case Presentations, Breast, Mortality and Morbidity, GI/Surgery Multidisciplinary, Vascular and Trauma Conferences. While the didactic framework is set by the faculty, its implementation is the responsibility of the chief residents in order to ensure that the curriculum is responsive to the needs of the trainees.

Please do not hesitate to contact us for further information.

Charles Goldman, M.D., FACS
Program Director

Curriculum
- Long-standing AOA residency program with recent ACGME accreditation.
- Case volumes for general surgery far exceed ACOS requirements.
- Outpatient clinic experience at Surgical Affiliates, Katzmann Breast Center, Weight Loss & Nutrition Center (bariatric services) and Trauma Clinic.
- Excellent didactic program, including regular Grand Rounds, M&M, Faculty/Resident Lectures, Specialty Conferences (Breast, Critical Care, GI, Trauma, Vascular), as well as Journal Club.
- Surgical Skills, Simulation, Porcine and Cadaver Labs at the Des Moines University.
- Resident teaching opportunities through faculty appointment at Des Moines University.
- Research opportunities available.

Faculty
- More than 20 passionate, dedicated teachers.
- Rotations include general surgery, surgical oncology, breast, colorectal, trauma, ICU, vascular, transplant, pediatric and cardiothoracic. All available in-house.

Resident Call
- Night Float rotation system; PGY 1-4 average 1 night in 5.
- Chief residents on call from home.

Hospital & Clinic Highlights
- 802-bed acute care, not-for-profit Catholic hospital situated on three campuses (Mercy Medical Center – Des Moines, Mercy Medical Center – West Lakes and Mercy Franklin) all within 10 minutes of each other.
- Level II Trauma Center.
- Expansive affiliated multi-specialty clinic system.
- One of the Midwest’s largest referral centers, offering a wide variety of specialty services.
- Mercy and Iowa Heart Center combine the region’s leading cardiologists and surgeons with the state’s leading cardiovascular hospital.
- Participation in the Iowa Center for Translational and Clinical Research.
- Member, Iowa Oncology Research Association (North Central Treatment Group).
- Medical staff of more than 800 physicians and allied health professionals.
- Diverse patient population with 15,600 hours of interpretation services provided annually.
